Applicant respectfully requests consideration and entry of the following amendment  
submitted in response to the Office Action dated May 22, 2003, and made final.

IN THE CLAIMS

1. (four times amended) A system for generating hydrogen comprising:

feed water;

a liquid metal nuclear reactor having a non-radioactive secondary heat loop comprising a  
recirculated heat transfer medium;

E1  
a steam generator connected to said secondary heat loop, said heat transfer medium and  
said feed water passing through said steam generator, said steam generator capable of raising the  
temperature of said feed water;

a high temperature water cracking system, said feed water coupled to said water cracking  
system by a feed water input line, said secondary heat loop and said recirculated heat transfer  
medium being separate from said high temperature water cracking system; and
